ITM at Minexpo 2024: innovation, customised solutions and sustainability

Valsamoggia, Bologna, Italy, 19 September 2024 - ITM Group, **pioneer in undercarriage sensor technology and a premier solution provider in the industry**, will be showcasing at **MINExpo 2024**, the largest mining event globally, happening from **Sept. 24 - 26 in Las Vegas**. The Group will unveil its latest advancements in the **North Hall, booth 2361**.

"We are thrilled to take part in MINExpo 2024," **said Cecilia La Manna, CEO of ITM Group**. "Being an industry leader entails managing the full life cycle of the undercarriage, from production to usage by meticulously analysing performance in the most rigorous applications and under various extreme working conditions."

Besides traditional products, attendees will have the chance to see how ITM is driving the industry's transformation with **TRUST ITM®**, an innovative tracking system for monitoring the status of undercarriages, reducing downtime, boosting productivity and safety in the field, and aiding the operation of autonomous vehicles. TRUST ITM® employs wireless sensors and IoT technology, providing real-time data on key parameters of monitored components via the **TrackAdvice®** platform: a proprietary software developed by ITM for optimal undercarriage management, capable of analysing wear status, planning maintenance, and scheduling replacements.

As a **solution provider**, ITM will display its proficiency in managing and executing **complex, customised projects** tailored to specific customer requirements. ITM delivers turnkey solutions that blend design expertise with highly specialized manufacturing, encompassing all production processes and testing phases necessary for developing dedicated solutions.

Environmental responsibility is a priority for ITM, which is working on solutions to lessen the environmental impact of the company's production processes and the machines operating with the Group's components.
